PROFESSIONAL SUMMARY

Information Science & Engineering graduate focused on DevOps, cloud infrastructure, containerization, and reliable software delivery. Building an event-driven microservices platform with Docker, Docker Compose, Apache Kafka, MongoDB, Node.js, and REST APIs, alongside hands-on Linux/Git workflows and container troubleshooting. Developing practical familiarity with AWS, Kubernetes, Terraform, Ansible, Jenkins, and CI/CD concepts.

TECHNICAL SKILLS

Cloud & IaC: AWS fundamentals - EC2, S3, IAM, VPC, CloudWatch • Terraform • Ansible

Containers & Delivery: Docker • Docker Compose • Kubernetes fundamentals • Jenkins • CI/CD fundamentals

Systems & Development: Linux / Ubuntu • Bash / Shell • Python • Node.js • Express.js • SQL

Data & Messaging: MongoDB • Apache Kafka • REST APIs

Version Control & Tools: Git • GitHub • VS Code • VMware

SELECTED PROJECTS

E-Commerce Platform - Event-Driven Microservices | ONGOING

Tech: Node.js • Express.js • MongoDB • Apache Kafka • Docker • Docker Compose • REST APIs

- Building a containerized e-commerce platform with independent Product, Order, and Inventory microservices using Node.js and Express.js.
- Implemented event-driven communication through Apache Kafka with dedicated product-events, order-events, and inventory-events topics; Inventory Service consumes product and order events for reservation and rejection workflows.
- Integrated MongoDB for service data persistence and REST APIs for synchronous service interfaces alongside asynchronous Kafka-based workflows.
- Containerized the multi-service environment with Docker and Docker Compose, configuring service connectivity and communication inside the container network.
- Implemented Kafka producers and consumers and troubleshooted topic routing, consumer behavior, service connectivity, and inter-service communication; currently exploring Kubernetes orchestration and CI/CD practices.

Docker & DevOps Practice Environment

Tech: Docker • Linux • Git • GitHub

- Authored Dockerfiles, built images, ran containers, configured port mappings, and practiced image lifecycle and deployment fundamentals.
- Diagnosed container build/runtime issues and combined Linux, Docker, Git, and GitHub into a repeatable development-to-deployment workflow.

Linux Development & Git Workflow

Tech: Ubuntu • Git • GitHub • CLI

- Configured Ubuntu as a terminal-first development environment and managed Git workflows from the command line, including staging, commits, branches, pulls, and pushes.
- Applied Linux fundamentals across files, permissions, package management, users, processes, and command-line troubleshooting while maintaining repositories on GitHub.

DEVOPS PRACTICE & LAB EXPOSURE

- Structured cloud and automation learning across AWS EC2, S3, IAM, VPC, CloudWatch, Terraform, Ansible, Jenkins, Kubernetes, and CI/CD concepts.
- Linux and container lab practice covering permissions, users, processes, package management, Docker image/container lifecycle, networking, deployment fundamentals, and runtime debugging.

EDUCATION

B.E. - Information Science & Engineering

Global Academy of Technology, Bengaluru

Pre-University - Sri Chaitanya PU College, Bengaluru

School - Venkat International Public School, Bengaluru

2022 - 2026

CGPA: 7.68

82%

2009 - 2020

CORE COMPETENCIES

Engineering Focus: Troubleshooting • Containerization • Version control • Event-driven systems • Documentation

Working Style: Analytical problem solving • Team collaboration • Quick learning • Attention to detail
